AKASH SHANKAR

Full-Stack Engineer

Bengaluru, India | s.akash101201@gmail.com | +91 9148766296
linkedin.com/in/akash-shankar-450290212

PROFESSIONAL SUMMARY

Full-Stack Engineer who builds responsive, elegant mobile and desktop web UIs and scales the Node.js backends behind them. Strong in JavaScript and TypeScript across React and Angular front-ends and Node.js, REST, and GraphQL services, with MongoDB and SQL / relational data modeling. Applies design patterns and writes production-ready, well-tested code (Jest, 80% coverage) shipped through CI/CD on Google Cloud Platform. Takes a data-driven approach to new features, has architected microservices that sustain thousands of messages per second, and collaborates with product, design, and engineering to turn vision into reliable B2B products.

NOTABLE ACHIEVEMENTS

- Promoted from intern to full-time Software Engineer within 6 months on the strength of measurable full-stack delivery.
- Cut average page-load time by 30% (96 average Lighthouse score) and production regressions by 40% through reusable, well-tested UI components.
- Architected RabbitMQ-based microservice messaging that sustains thousands of messages per second, scaling backend throughput.
- Wrote production-ready code across 4+ B2B products, building 25+ reusable components and raising Jest test coverage to 80%.

SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3, SCSS/Sass

Front-End: React, Angular, Responsive Web Design (Mobile + Desktop), Cross-Browser Compatibility, Web Performance Optimization, jQuery, Figma

Backend & APIs: Node.js, REST APIs, GraphQL, Microservices, RabbitMQ, Socket Programming

Databases: MongoDB, MySQL, SQL / Relational Databases, Google BigQuery, Data Modeling

Design & Architecture: Design Patterns, Microservices, Scalability, Event-driven Messaging, Production-ready Code

Testing & Quality: Jest, Unit & Integration Testing, Quality Assurance (QA), Debugging, Peer Code Reviews, Coding Standards

Cloud, DevOps & Practices: Google Cloud Platform (GCP), Docker, Git, CI/CD, Agile/Scrum, JIRA, Data-driven Development

AI / LLM: Large Language Models (LLMs), LangChain, LlamaIndex, RAG, Prompt Engineering

PROFESSIONAL EXPERIENCE

Software Engineer — Zebra Technologies Jul 2024 - Present

- Built responsive, elegant mobile and desktop web UIs in React and Angular (TypeScript) across 4+ B2B products, cutting average page-load time by 30% (96 Lighthouse).
- Developed Node.js services and REST and GraphQL APIs backed by MongoDB and SQL / relational data stores, delivering full-stack features end to end.
- Applied design patterns and wrote production-ready code, building 25+ reusable UI components and raising Jest test coverage to 80%, reducing production regressions by 40%.
- Scaled backend throughput with asynchronous, queue-based microservices and automated builds via Git-based CI/CD and Docker on Google Cloud Platform.
- Built internal LLM-powered tools that generate UI from Figma designs and auto-diagnose defects, saving developers 6 hours each week.
- Took a data-driven approach to new features and collaborated with product, design, and engineering across Agile/Scrum (20 pull requests/month).

Software Engineer Intern — Zebra Technologies Jan 2024 - Jun 2024

- Built full-stack LLM-powered web applications and chatbots with React front-ends and Node.js services that automated 60% of routine customer queries.
- Integrated REST APIs and data layers to retrieve, process, and present data, cutting manual data-retrieval effort by 45%.
- Delivered analytics over Google BigQuery (10 million+ rows) with Python, surfacing results through user-facing interfaces.
- Built tooling that auto-generated unit tests and refactoring suggestions, improving code quality and accelerating development by 30%.

PROJECTS

- **Figma-to-Code Generation Tool (Zebra Technologies):** Internal tool that converts Figma designs into production React and Angular front-end interfaces and recommends refactors, reducing UI build time by 35%. Tech: React, Angular, TypeScript, LLMs.
- **Microservice Communication with RabbitMQ:** Architected asynchronous, queue-based messaging between single-responsibility services using established design patterns, sustaining thousands of messages per second. Tech: Microservices, RabbitMQ, Message Queues, Design Patterns.
- **Yet Another Kafka:** Re-implemented Kafka's core publish/subscribe streaming using Python socket programming, supporting multiple concurrent producers and consumers. Tech: Python, Socket Programming, Distributed Systems.
- **Agentic VS Code Defect-Resolution Extension (Zebra Technologies):** LLM-powered agents read JIRA tickets to localize and fix bugs directly in the editor, streamlining issue resolution. Tech: TypeScript, VS Code Extension API, LLMs, LangChain.
- **3D Environment Generation from 2D Floor Plans:** Interactive web application that converts a user's 2D floor plan into a mutable 3D model and applies different architectural styles on demand. Tech: JavaScript, 3D Rendering, Web UI.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering — PES University 2020 - 2024
Minor Specialization: Machine Learning & Data Science | CGPA: 8.46/10

Class 12 (Karnataka PUC) — Base PU College (88.13%) 2018 - 2020

Class 10 (CISCE) — Presidency School (92.33%) 2018

CERTIFICATIONS

- Java Programming — NPTEL
- Blockchain A-Z: Build Your First Blockchain — Udemy
- SwiftUI Masterclass 2023: iOS App Development — Udemy
- Flutter and Dart for App Development — Udemy

LANGUAGES

English, Hindi, Kannada, Tamil
